

Siamese Flying Fox

Crossocheilus siamensis

Range

This attractive fish originates in fast flowing waters throughout South East Asia.

Size and Longevity

The Siamese Flying Fox grows up to 15cm in size, and can live as long as 10 years.

Water Quality

Temperature: 24 °C

pH: 7.0

General Hardness: 100—150ppm

Feeding

This active community fish is a tireless algae eater which is effective on even the most stubborn types of algae, and it won't harm plants. This makes it a perfect addition to tropical tanks. They will also accept prepared foods.

Appearance

A slender fish with a distinct black horizontal stripe from nose to the fork of the tail with silver white underside with a pair of short forward pointing barbels.

Sexing

Sexing is difficult as no external differences are visible, other than that the females may be slightly fatter.

Housing

The Siamese Flying Fox is best kept in schools of 6 or more. As it is a strong jumper, the use of a cover glass is recommended.

The Siamese Flying Fox is a useful addition to your tank, as it is one of the best algae eaters available. An attractive community fish, it is very popular and available throughout the year.
