

Lacustris Rainbow (Turquoise Rainbow)

Melanotaenia lacustris

Size

Grows up to 10 cm.

Range

Only from Lake Kutubu, southern highlands of Papua New Guinea.

Water

Not fussy, Ph about 7.0, general Hardness up to 150 ppm.

Food

Will take any aquarium fish food.

Comments

This beautiful New Guinea Rainbow develops a deep blue/green colour on the upper half of its body with a silvery white lower half.

Males show more colour than females. A peaceful and showy species that makes an ideal community fish .
