Cryptocoryne Lucens
Cryptocoryne lucens

Natural Range
Sri Lanka

Maximum Size
20-25cm

Water Quality
- Temperature: 22°C - 26°C.
- pH: 6.8 - 7.2
- General Hardness: 100 - 150ppm.

Lighting
Medium

Foliage
Long Pointed

Recommended Tank Position
Midground to Background

Growth Speed
Slow

Ease of Keeping
(1 = easy, 5 = difficult)
3

Planting Instructions
(Boxed AI Naturals Plant)
- Take the plants from the bag

- Carefully remove all the jelly by washing under a tap

- Individually plant into substrate, taking care to only bury the roots

General Information
This beautiful Cryptocoryne ("Crypt" to enthusiasts) looks best when planted in a bunch in the mid to background of an aquarium. The green leaves, which are long and pointed, will create a lush, attractive look.

Well suited to community tanks, it prefers stable water conditions, so ensure that regular testing of the water parameters is carried out.

Reproduction occurs quickly once this plant is settled. It will send out runners, and eventually form a dense community. It is advisable to trim the runners occasionally.

Cryptocoryne Lucens is part of the Aquarium Industries Naturals Range.
