

Cricket

Nutritious food for Reptiles

The nutritional benefits of feeding Crickets to Reptiles and Amphibians has long been known.

In addition, some pets will only accept live food, as their appetite is stimulated by the movement of food items

Live food for Fish

Crickets add variety to your fishes diet, as well as providing an additional source of essential vitamins and minerals.

Crickets are suitable for most predatory fish such as Oscars, Grunters.

They are also ideal food for specialised surface feeders such as Archer Fish, Butterfly Fish, Hatchet Fish, Half Beaks and Saratoga.

Sizes

AI Crickets come in 4 sizes: Pins (i.e. the size of a pin head), Small, Medium and Large.

Be sure to purchase the right size for your pet.

Housing

On arrival, Crickets should be kept in a cool area.

Your AI Cricket Container holds some egg carton which provides surface area around which the crickets can move. It also contains pellets for the absorption of waste, along with a slice of carrot which provides food and moisture.

If you are keeping your AI Crickets for long periods, additional fresh food (carrot or lettuce) may be needed.

Crickets as Pets

Insects such as Crickets can make great pets.

For more information about keeping Crickets as pets, visit the Australian Museum website, www.amonline.net.au and head to the Insects Collection.
