

Pygmy Chain Sword

Echinodorus tenellus

Natural Range

North, Central and South America

Maximum Size

7-10cm

Water Quality

- Temperature: 22°C - 26°C.
- pH: 6.8 – 7.2
- General Hardness: 150 - 200 ppm

Lighting

Medium-High

Foliage

Slim Pointed

Recommended Tank Position

Foreground

Growth Speed

Fast

Ease of Keeping

(1 = easy, 5 = difficult)

2

Planting Instructions (Boxed AI Naturals Plant)

- Take the plants from the bag
- Carefully remove all the jelly by washing under a tap
- Individually plant into substrate, taking care to only bury the roots

General Information

This is the smallest of the Chain Sword varieties, and a very attractive aquarium plant.

Fast growing, it sends out runners and spreads quickly. Eventually it will create a beautiful lawn-like effect.

The Pygmy Chain Sword has delicate roots so, in order to protect them, it is best planted in fine gravel or sand

Pay particular attention to the lighting in your tank, as this plant will die very quickly if it is not provided with enough light.

It should ideally be kept at a temperature of between 22°C - 26°C, but will tolerate temperatures of up to 28°C.

An excellent aquarium plant, Pygmy Chain Sword is part of the Aquarium Industries Naturals Range.
