Planting Instructions

- Take the plants from the bag. We recommend that you use long handled Aquascaping Tweezers.
- Carefully remove all the jelly by washing under a tap, or in a bowl with lukewarm water.
- Individually plant into substrate, taking care to only bury the roots.

General Information

Cryptocoryne lutea's dense foliage makes best suited for planting in the midground area of your tank. (For more tips about Aquascaping your Aquarium, download our free guide "Aquascaping. 10 tips for making the most of your tank". Available at aquariumindustries.com.au.)

Like most *Cryptocoryne* species, this plant prefers stable water conditions, so be sure to test regularly. You will find it's preferred water conditions at left.

Over time, *Cryptocoryne lutea* will develop lush green leaves. You can use it as a filler around other feature plants when creating a planted aquarium.

Once settled reproduction occurs quickly, as the plant will send out runners

Due to it's large root system, this is a root feeder, so use substrate fertilisers.

Cryptocoryne lutea is part of the Aquarium Industries Naturals Range.
