

Cryptocoryne walkeri

Cryptocoryne walkeri

Natural Range

Sri Lanka

Maximum Size

15-20cm

Water Quality

- Temperature: 22°C - 26°C.
- pH: 6.8 - 7.2
- General Hardness: 100 - 150 ppm.

Lighting

Medium

Foliage

Long Pointed

Tank Position

Midground

Growth speed

Medium

Ease of Keeping

(1 = easy, 5 = difficult)

3

Planting Instructions

- Take the plants from the bag. We recommend that you use long handled Aquascaping Tweezers.
- Carefully remove all the jelly by washing under a tap, or in a bowl with lukewarm water.
- Individually plant into substrate, taking care to only bury the roots.

General Information

Cryptocoryne walkeri will develop dark brown / red leaves, providing a refreshing burst of colour in an otherwise sea of green. This makes it an ideal contrast plant in any aquarium, provided the water conditions are suitable (see left).

Like most *Cryptocoryne* species it prefers stable water conditions, and will feed via its roots. We recommend the use of a nutrient rich substrate and / or the addition of tablet fertilisers, for optimal health.

Cryptocoryne walkeri is part of the Aquarium Industries Naturals Range.
