

Broad Leaf Lobelia

Lobelia cardinalis 'broad leaf'

Natural Range

Central and Eastern North America

Maximum Size

15-20cm

Water Quality

- Temperature: 22°C - 26°C.
- pH: 6.8 - 7.2
- General Hardness: 100 - 150ppm.

Lighting

Medium

Foliage

Oval

Recommended Tank Position

Foreground to Midground

Growth Speed

Medium

Ease of Keeping

(1 = easy, 5 = difficult)

2

Planting Instructions

(Boxed AI Naturals Plant)

- Take the plants from the bag
- Carefully remove all the jelly by washing under a tap
- Individually plant into substrate, taking care to only bury the roots

General Information

Broad Leaf Lobelia makes an ideal filler plant for use between low foreground plants and tall background varieties. It looks especially good when planted in a row diagonally from the front to the back of the tank, in a 'terraced' arrangement.

In warmer climates, this plant can also be used on the edge of ponds.

It is not very demanding of water parameters, but does require consistency. Avoid large swings in water parameters, and test your water regularly.

Once established, it can be propagated by replanting cuttings.

Broad Leaf Lobelia is part of the Aquarium Industries Naturals Range.
