

## Green Pennywort

*Lysimachia nummularia*

### Natural Range

Central Europe

### Maximum Size

To surface

### Water Quality

- Temperature: 22°C - 26°C.
- pH: 6.8 - 7.2
- General Hardness: 150 - 200ppm.

### Lighting

High

### Foliage

Small Round

### Recommended Tank Position

Midground to Background

### Growth Speed

Slow

### Ease of Keeping

(1 = easy, 5 = difficult)

2

### Planting Instructions

#### (Boxed AI Naturals Plant)

- Take the plants from the bag
- Carefully remove all the jelly by washing under a tap
- Individually plant into substrate, taking care to only bury the roots

### General Information

Green Pennywort has a fresh, green leaf, and is well suited to both aquariums and the edge of ponds. Although it is slow growing, the attractive flowers that it develops once it reaches the water surface make it worth the wait.

For optimal growth, Green Pennywort requires good lighting and a nutrient rich substrate such as gravel. This plant is suitable for cooler climates, as it can tolerate cooler temperatures periodically.

Once established, it can be propagated through cuttings.

Green Pennywort is part of the Aquarium Industries Naturals Range.
