NEW & IMPROVED

Aquarium Industries are pleased to release our new frozen food range with new packaging and improved recipes.

Aquarium Industries frozen foods range is made to our own exacting recipes, based on the food that your fish and turtles feed on naturally.

This range perfectly complements dry foods and contributes to a balanced, healthy diet. The AI frozen fish and turtle foods have been formulated with the ideal composition of protein, carbohydrates and lipids with all foods containing essential vitamins and minerals and do not contain any artificial colours or preservatives. It is recommended to feed your fish 1-3 times per day and your turtle every 1-3 days, feeding them only as much as your fish and/ or turtle can eat within a 5-minute period. Ensure to remove any uneaten foods to avoid affecting water quality.

This guide is designed to be used based on the average fish size that you would add to your tank. For example, Baby Brine have not been included for Angelfish as these are too small for Angelfish purchased at a retail store, but Angelfish fry & larvae can eat Baby Brine.
